

**QUADRATIC FUNCTION
AND THEIR GRAPHS**

Graph each parabola. Label the vertex, axis of symmetry, and find at least four other points.

Method #1 (the one you learned in Algebra II)

"Vertex Form"

$$y = a(x - h)^2 + k$$

Vertex = (h, k)
Axis of sym: $x = h$
Other coordinates

x	y

Graphs for #1-2:

x	y
-3	2
-2	3
-1	6

Examples:

1) $y = x^2 + 6x + 11$

Complete the square

$$y = x^2 + 6x + \underline{\quad} + 11 - \underline{\quad}$$

$$y = x^2 + 6x + 9 + 11 - 9$$

$$y = (x + 3)(x + 3) + 2$$

$$y = (x + 3)^2 + 2$$

Vertex = (-3, 2)

2) $y = -2x^2 + 4x$

Divide by (-2) first!

$$y/-2 = x^2 - 2x$$

$$y/-2 = x^2 - 2x + \underline{\quad} - \underline{\quad}$$

$$y/-2 = x^2 - 2x + 1 - 1$$

$$y/-2 = (x - 1)^2 - 1$$

$$y = -2(x - 1)^2 + 2$$

Vertex = (1, 2)

Multiply by (-2) last!

x	y
1	2
2	0
3	-6

Method #2 (axis of symmetry formula)

The formula: $x = \frac{-b}{2a}$

Vertex = (x, ?)
Axis of symmetry: $x = x$
Other coordinates

x	y

Examples:

3) $y = 2x^2 - 8x + 5$

$$x = \frac{-(-8)}{2(2)} = \frac{8}{4} = 2$$

plug the 2 in to get the "y"

$$y = 2(2)^2 - 8(2) + 5$$

$$y = -3$$

Vertex = (2, -3)

4) $y = 7 - 3x^2$

$$x = \frac{0}{2(-3)} = \frac{0}{-6} = 0$$

$$y = 7 - 3(0)^2$$

$$y = 7$$

Vertex = (0, 7)

Graphs for #3-4:

x	y
2	-3
1	-1
0	5

x	y
0	7
1	4
2	-5
